

# LAB ACTION

The Lab Data Management System (LDMS) is a customized application, using industry specific terminology and calculations to provide unmatched quality data.

**LAB4ACTION** helps to create a seamless organization where everyone involved in the process has access to the data and analysis tools required to make sound decisions that directly affect quality.

**DECIDE4ACTION** moves the process of information gathering, decision making, calculation, review, and release to the production workspace.

The multiuser, network-based software allows you to access workstations in the lab, on production lines, and in office. Utilizing a centralized enterprise database, each user has immediate access to both real time and historical quality related data.

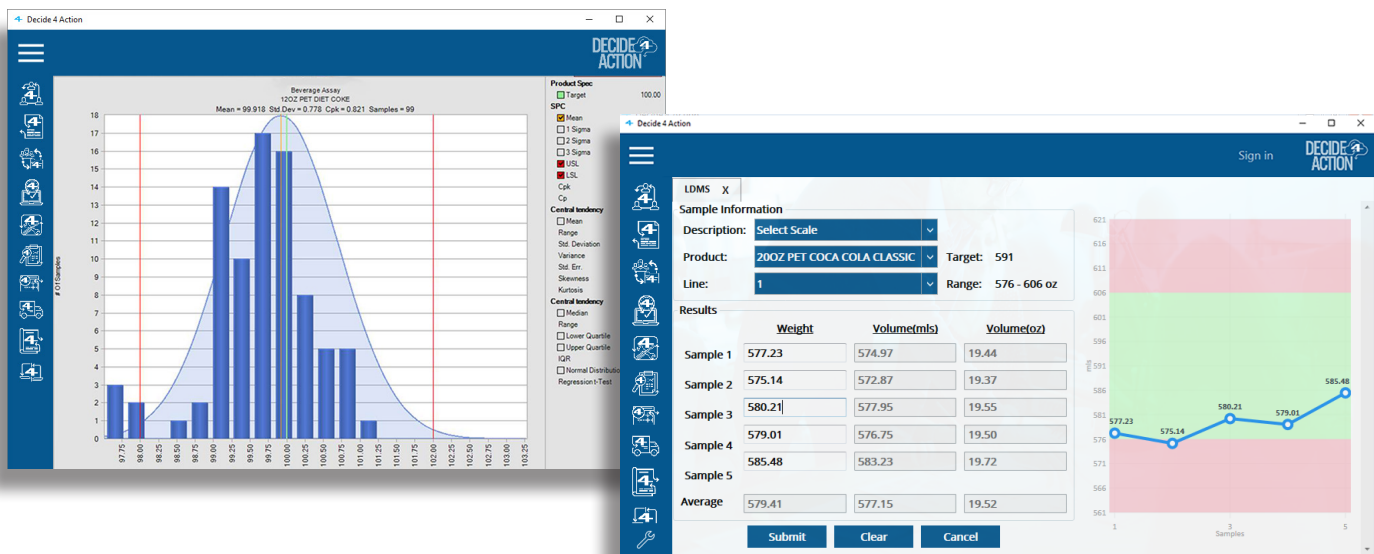

# DECIDE4ACTION

**LAB4ACTION** supports all quality assurance areas of responsibility and provides extensive Data Integrity Logic with alerts for “Out of Specification” test results. Statistical tools allow you to quickly pinpoint leading reasons for off-quality, understand process variation, determine optimal machine settings and view operator practices. Historical data is readily available for reporting and performance analyses.

**LAB4ACTION** screens have been specifically designed for all phases of laboratory management and the system requires very little operator training which allows you to lower training costs and increase efficiency.

## KEY FEATURES

- Complete Data Analyses for All Quality Functions
- Direct Equipment Interface and Automatic Data Collection
- Centralized Database with Dashboard Capabilities
- Workflow and Document Control Integration
