

# TESTING ACTION

SQL Database with Server Software, Test Equipment Hardware and Integration Services

Do you have Test Technicians looking at Engineering documents, trying to understand and interpret them to see if your products meet the requirements?

Is your test equipment slow and/or outdated?

Are you “under testing” and consequently sending defective products to your customers?

Are you “over testing” and therefore rejecting perfectly good products?

Are you “testing twice” just to make sure?

If you are doing any of the above, this is costing your company thousands if not millions of dollars a year. Furthermore, your reputation is at stake every time you ship defective products to your customers.

We can help you develop a number of sets, for your Automated Test Equipment (ATE) that will be fully connected to your ERP, Engineering database and production equipment.

## COMPLETE SOLUTIONS:

SQL database with server software, Test Equipment hardware and integration services

## SOFTWARE SOLUTION WITH SERVER:

If you already have the required test equipment and are looking for a more efficient database integration, we can provide you with a software only solution (with or without the server)

## HYBRID:

We can work with you, provide the database, the software and the design for the test equipment that you will build yourself

For over 15 years we have been building equipment such as:  
Automatic Test Equipment for Electronic Capacitors  
Train Door System Test Equipment  
Software Integration and Equipment Design Consulting
