

AUTOMATED MAGNETIC TEST MANAGER

The Automated Magnetic Test Manager (AMM) is a system designed to automate data collection and provide robust test program control for Voltech™ Automated Testers in the Magnetics industry.

The AMM system is equipped with test program tracking features which ensure that operators are always using the latest approved program. Built-in test fixture control ensures that the wrong fixture is never used for a test.

The AMM allows your Voltech™ Tester to be supervised by a PC which extracts approved test program data from your Test4Action database to allow automatic machine configuration for a specific part's test requirements. Pictures of example mounting configurations can be retrieved from your Test4Action database and displayed to the user before each new test to ensure proper mounting and wiring. The test is then monitored in real-time by the supervisory PC and results are fed back to your Test4Action database in real time for future archival and data analysis purposes.

KEY SPECIFICATIONS

Serial No.	Coil No.	Temperature	CTY	TR	MAGI	HPAC	Tested
1	1	20.3 °C	0.736	1.27	0.481	2.32E-04	4
	2	20.3 °C	0.811	1.23	0.490	2.01E-04
